

Auto Librarian™ Remote Circulation SE Version is a full function circulation module to be used in conjunction with the **Auto Librarian™ SE Library Server Version** as a networked circulation computer when installed onto a remote computer networked to the computer with **Auto Librarian™ SE Library Server Version** installed.

FEATURES

Auto Librarian™ Remote Circulation SE Version is designed to perform remote circulation functions when used in conjunction with **Auto Librarian™ SE Library Server Version** for Windows 98/Me/NT/2000/XP/2003. ***Users of earlier versions of Auto Librarian™ must upgrade in order to install the Remote Circulation software.***

Auto Librarian™ Remote Circulation SE Version enables the user to perform all of the operations available on the Circulation file folder tab of the **Auto Librarian™ SE Library Server Version**.

These functions include:

- **Check Out**
- **Check In**
- **Renewals**
- **Fines**
- **Reserves**

Circulation Due Dates are set daily from the server taking advantage of the new fixed due date intervals. Fines are calculated taking into account the skip fine days set in the **Auto Librarian™ SE Library Server** software.

Borrower and Book/Item information (form view) can be accessed at Check Out however this option can be password protected.

The full on screen help file can be accessed by the F1 function key at any time for case sensitive help.

Live circulation statistics are updated to the networked server computer instantaneously.

Up to three remote circulation computers can be networked to the library server (one licensed copy per computer).

SYSTEM REQUIREMENTS

Auto Librarian™ Remote Circulation SE works in conjunction with Auto Librarian™ SE Library Server Version. Remote Circulation computer must be networked to Library Server computer. System Requirements mirror those of Windows OS.

OPERATING

SYSTEM: Windows 8 (32-bit or 64-bit) or Windows 7 (32-bit or 64-bit)
